

Intro

I - Généralités

1. Nécessité de l'I à Division d'amplitude.

$$I(x) = 2I_0 \left(1 + \operatorname{sinc} \left(\frac{\pi ab}{\lambda p} \right) \cos \left(\frac{2\pi ax}{\lambda D} \right) \right)$$

$$\operatorname{sinc} \left(\frac{\pi ab}{\lambda p} \right) = 0 \Leftrightarrow \boxed{b = \frac{\lambda p}{a}}$$

2) lame d'air

$$\delta = \overline{ABC} - \overline{AD} = 2e \cos i$$

Figure d'interférence à l'infini.

II - Michelson

1) Coin d'air

On fait tendre e vers 0 : contact optique

On penche un miroir d'un angle α .

2) Etude spectroscopique du doublet du Sodium

λ_1, λ_2 :

$$I_1(\delta) = I_0 \left(1 + \cos \left(\frac{2\pi\delta}{\lambda_1} \right) \right), \quad I_2 = I_0 \left(1 + \cos \frac{2\pi\delta}{\lambda_2} \right)$$

$$I_{\text{tot}} = I_1 + I_2 = 2I_0 \left(1 + \cos \left(\pi\delta \left(\frac{1}{\lambda_1} + \frac{1}{\lambda_2} \right) \right) \cdot \cos \left(\pi\delta \left(\frac{1}{\lambda_1} - \frac{1}{\lambda_2} \right) \right) \right)$$

$$I_{\text{tot}} = 2I_0 \left[1 + \cos \left(2\pi\delta \frac{\lambda_0}{\lambda_1 \lambda_2} \right) \times \cos \left(2\pi\delta \left(\frac{\Delta\lambda/2}{\lambda_1 \lambda_2} \right) \right) \right]$$
